DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114 was filed in this application after a decision by the Board of Patent Appeals and Interferences, but before the filing of a Notice of Appeal to the Court of Appeals for the Federal Circuit or the commencement of a civil action. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 11/2/09 has been entered.

Allowable Subject Matter

2. Claims 2-5, 8-10, 15, 16, 18-22, 34-37, 43, 44, and 46-65 are allowed.
3. Since allowable subject matter has been indicated, applicant is encouraged to submit formal drawings in response to this Office Action. The early submission of formal drawings will permit the Office to review the drawings for acceptability and to resolve any informalities remaining therein before the application is passed to issue. This will avoid possible delays in the issue process.
4. The following is an examiner's statement of reasons for allowance. None of the prior art of record either individually or in combination teach the following:

- obtaining requirement-indicating data comprising an extraction process based on previous history of usefulness of prior extracted data.
- obtaining requirement-indicating data comprising an extraction process based on a model for managing the transactional subject

The present invention discloses a method for planning a business decision. The first allowable feature of obtaining requirement-indicating data comprising an extraction process based on previous history of *usefulness* of prior extracted data is not disclosed by any prior art reference. The closest prior art, Hafner et al (US 5,893,076) shows a supplier driven commerce transaction processing system where online processing of business transactions between at least one supplier and one retailer. In Hafner et al, suggested business transactions are generated from transmitted business data, and are received by the supplier, where the supplier modifies and approves the transactions, and actual business transactions are ultimately generated from the approved transactions. The next closest prior art, Meltzer et al (US 6,125,391) discloses an infrastructure for connecting businesses with customers, suppliers and trading partners. In Meltzer et al, business interface definitions tell potential trading partners the services the company offers and the documents to use when communicating with such services, and a typical business interface definition therefore allows a customer to place an order by submitting a purchase order or a supplier checks availability by downloading an inventory status report. However, Hafner et al, and Meltzer et al fail to disclose the feature of obtaining requirement-indicating data comprising an extraction process

based on previous history of usefulness of prior extracted data. This distinct feature has been added to independent claims 43 and 46, and renders them and all claims that depend from them allowable.

The second allowable feature of obtaining requirement-indicating data comprising an extraction process based on a model for managing the transactional subject is not disclosed by any prior art reference. The closest prior art, Hafner et al (US 5,893,076) shows a supplier driven commerce transaction processing system where online processing of business transactions between at least one supplier and one retailer. In Hafner et al, suggested business transactions are generated from transmitted business data, and are received by the supplier, where the supplier modifies and approves the transactions, and actual business transactions are ultimately generated from the approved transactions. The next closest prior art, Meltzer et al (US 6,125,391) discloses an infrastructure for connecting businesses with customers, suppliers and trading partners. In Meltzer et al, business interface definitions tell potential trading partners the services the company offers and the documents to use when communicating with such services, and a typical business interface definition therefore allows a customer to place an order by submitting a purchase order or a supplier checks availability by downloading an inventory status report. However, Hafner et al, and Meltzer et al fail to disclose the feature of obtaining requirement-indicating data comprising an extraction process based on a model for managing the transactional subject. This distinct feature has been added to independent claims 44 and 47, and renders them and all claims that depend from them allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
